

Tank Abrasive Blasting

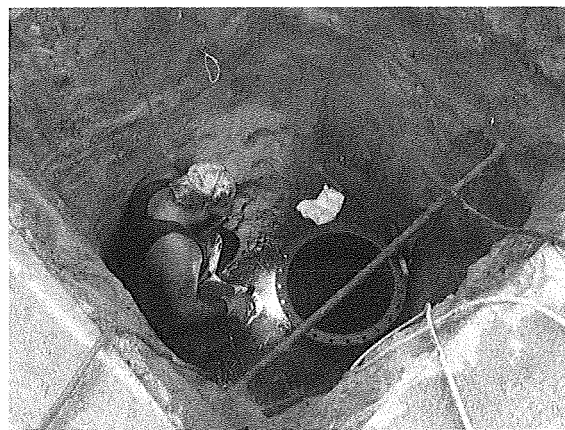

After tanks are cleaned of sludge and liquids, they receive an abrasive blast to prepare the surface for inspection and coating.

Submitted by Jim Manley
during 8/25/22 meeting

Tank Coating

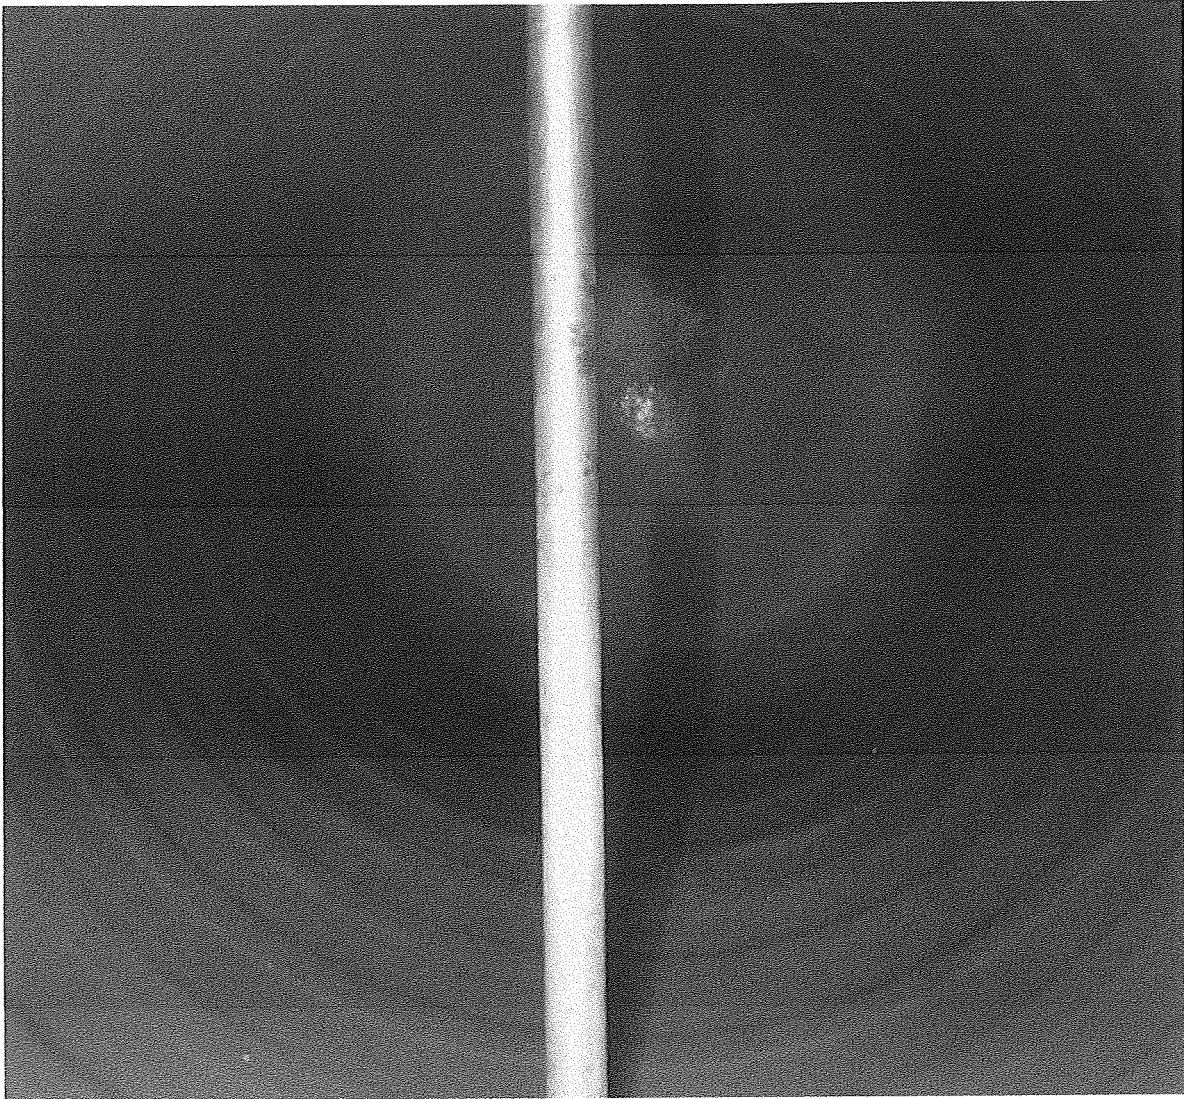

Once repairs are completed the entire tank interior is spray-coated with our **Armor Shield** systems to deter future corrosion and inhibit sludge build-up.

Tank Repair

Any weak or permeated areas found during inspection are repaired in accordance with accepted industry practices.

"Nesbro Consulting has utilized the tank testing services of WCC Tank Technology for more than 30 Years. WCC Tank Technology provides state-of-the-art precision tank testing and complete, personal attention to my client's needs. They provide testing in a timely manner and send report confirmation to my office the same day. This type of customer service and attention to detail is hard to find in any service industry today. Working with WCC Tank Technology is a WIN-WIN; you receive the latest precision tank testing technology, competitive pricing, and personal attention."
