PROJECT NAME:	**NEWBURGH CHICKEN, LLC- POPEYES**
PROJECT NO.:	**23-17**
PROJECT LOCATION:	**197 SOUTH PLANK ROAD**
	SECTION 60, BLOCK 3, LOT 6.1
REVIEW DATE:	**29 NOVEMBER 2023**
MEETING DATE:	**7 DECEMBER 2023**
PROJECT REPRESENTATIVE:	**DYNAMIC ENGINEERING**

1. Planning Board should discuss the need for continuation of sidewalks along the entire property frontage as is standard practice for the Town of Newburgh on State highways.

2. The applicant's representative are requested to discuss the proposed full movement entrance at NYS Route 52. Existing traffic conditions limit access to this driveway making left turns very difficult out of and into the site. Ken Wersted's and NYSDOT comments on this access point should also be received early in the process.

3. A permit for demolition of the site is required from the Town of Newburgh Building Department. A note should be specifically added to Sheet 3 identifying that a permit is required prior to any demolition.

4. Numerous Zoning Board of Appeals variance relief have been granted to the project. These are specifically identified in the project narrative submitted.

5. The building is required to be provided with fire protection sprinklers in accordance with Chapter 107-17 thru 26. The water supply should be upgraded to provide for sprinklers. Sprinkler and potable water connections should be designed in accordance with the attached detail.

6. Calculations supporting the size of the grease trap proposed on the sanitary sewer should be provided. NYSDEC has design standards for grease traps.

7. The location of the water main in NYS Route 52 should be confirmed.

8. Standard notes for connection to the Town of Newburgh Water & Sewer must be added to the plans. Copy attached.

9. Orange County Planning Referral is required.

10. The plans identify 43,130 square feet of disturbance. This equates to 0.99 acres. The applicants have identified that they are not required to receive coverage under the NYSDEC Stormwater SPDES Permit. This office recommends coverage under the permit to protect both the Town of Newburgh and the applicant from any circumstances which result in excavation, land disturbance or other activities including utility connections which are not currently identified on the plan to exceed one acre threshold. Project is in a very visible are/high traffic area such that review by outside agencies may occur.

11. A Stormwater Facilities Maintenance Agreement will be required to be filed.

12. Security for Stormwater Management and Landscaping are required. Cost estimates should be prepared and submitted for review. Town Board approval of the cost estimates and Inspection Escrow is required.

13. NYSDOT permits for off-site grading, utilities and access are required.

14. The applicant's representative are requested to evaluate the constructability of the retaining wall along the west property line. Wall is approximately 11 feet high in very close proximity to the adjoining property.

15. The existing Utility Notes on Sheet 8 with regard to water and sewer should state that existing water and sewer utilities are to be capped and new connections provided for the site.

16. Compliance with the Town's Tree Preservation Ordinance Chapter 172 of the Town Code should be addressed.

17. The plans should address the existing catch basin at the Route 300 access drive. Modifications to this will be required. Consideration for relocation of the catch basin to capture runoff at the access drive should be considered.

18. Show the 358 contour at the intersection of Route 300 and 52 in the vicinity of the existing catch basins.

19. The EAF submitted for the Type II Action identifies potential habitat for Indianna Bat. Mitigation measures including tree cutting time frame restriction should be identified on the plans.

20. Address proposed 90° bends in proposed sanitary sewer laterals

Respectfully submitted,

MHE Engineering, D.P.C.

Re: Newburgh Chicken, LLC – Proposed Popeyes Chicken
197 South Plank Road
Parcel ID No. 60-3-6.1

Dear Chairman Ewasutyn and Members of the Town of Newburgh Planning Board:

On behalf of Newburgh Chicken, LLC (the "Applicant"), we are pleased to submit the enclosed application for Site Plan Approval for the proposed development of a Popeyes Chicken at property located at 197 South Plank Road (New York State Route 52), known as designated as Tax Parcel No. 60-3-6.1 and located in the Business (B) Zoning District (the "Property"). The Applicant is the contract vendee of the Property, which is currently owned by Louis J. Gallo and Jean F. Gallo.

I. Proposed Development

The Property is currently developed with an approximately 2,691 square-foot, one-story fast-food establishment (specifically, a Dairy Queen) with a drive-thru and twenty-six (26) parking spaces. The existing fast-food establishment and drive-thru, which has been located on the Property for several decades, is a legal nonconforming use, as fast-food establishments are not permitted in the Business (B) Zoning District. The Applicant seeks to demolish the existing building and redevelop the Property with an approximately 2,537 square-foot, one-story fast-food establishment (specifically, a Popeyes Chicken) with a drive-thru and twenty-two (22) parking spaces. Construction of the new building in a different location on the Property will significantly improve on-site and off-site traffic conditions, while simultaneously improving the aesthetics of the Property.

II. Special Permit and Variances Granted by the Zoning Board of Appeals

Our office previously confirmed with the Town's consulting engineer, Patrick Hines, P.E., that, as the use is a nonconforming use and the Town's Zoning Code sets forth

specific dimensional regulations for each particular use, the Zoning Board of Appeals would need to approve the setbacks for the new construction. Additionally, the Zoning Board would need to grant a special permit pursuant to Town Code § 185-19.A(3) to permit the proposed nonconforming use of a fast-food establishment to continue on the Property.

The Applicant appeared before the Town Zoning Board of Appeals at its September 28 and October 26, 2023 meetings. At the October 26, 2023 meeting, the Zoning Board granted the Applicant a special permit pursuant to Town Code § 185-19.A(3), which authorizes the proposed nonconforming use to continue on the Property, albeit in a different location and under a new corporate entity. Additionally, in granting the special permit, the Zoning Board determined that the applicable bulk requirements for the project are those which are proposed as part of the development of the Property.

Nevertheless, there are certain dimensional requirements that apply to the project, regardless of the fact that the proposed use is not permitted by right in the Business (B) Zoning District. Accordingly, the Zoning Board granted the following area variances related to the project.

(1) A one (1) loading space variance from Zoning Code § 185-13.B(6), where the required loading spaces for the project is one (1) space and the proposed loading spaces is zero (0) spaces.

(2) A 99.4-foot (99.4') variance from Zoning Code § 185-13.D(6), where the minimum required distance from the intersection to the entrance to the Property on South Plank Road (Rt. 52) is 150 feet (150.0') and the proposed distance is 50.6 feet (50.6').

(3) An 11.7-foot (11.7') variance from Zoning Code § 185-18.C(4)(a), where the minimum required setback from the physical center line on Union Avenue (Rt. 300) is 80 feet (80') and the proposed setback is 68.3 feet (68.3').

(4) A 23.5-foot (23.5') variance from Zoning Code § 185-18.C(4)(b), where the minimum required front yard setback from Union Avenue (Rt. 300) is 60 feet (60.0') and the proposed front yard setback is 36.5 feet (36.5').

(5) A 6-foot (6.0') variance from Zoning Code § 185-14.M(2)(c), where the maximum permitted freestanding sign height is 14 feet (14.0') and the proposed freestanding sign height is 20 feet (20.0').

The Zoning Board granted the above area variances in reliance on the plan set titled "General Notes" (Sheet 1 of 2) and "Site Plan Exhibit" (Sheet 2 of 2), prepared by Dynamic Engineering Consultants, P.C. and dated October 17, 2023.

III. SEQRA

As part of its review of the application, the Zoning Board determined that the proposed redevelopment is a Type II action under Part 617.5(c)(9), as it is the construction of a primary, non-residential structure involving less than 4,000 square feet of gross floor area and not involving a change in zoning or a use variance. It is respectfully submitted that the Planning Board should reach the same conclusion (i.e., that the project is a Type II action under Part 617.5(c)(9)) and no further SEQRA review is required.

IV. Application Submission Materials

In support of this application, enclosed please find fourteen (14) copies of the following materials (twelve (12) for the Planning Board, one (1) for the Building Department, and one (1) for the Orange County Planning Department):

PROJECT NARRATIVE FOR THE PROPOSED POPEYES CHICKEN

Newburgh Chicken, LLC ("Newburgh Chicken") is the contract vendee of approximately 0.97 acres of certain real property located at 197 South Plank Road (NYS Route 52), situated within the Town of Newburgh ("Property"). The Property is currently owned by Louis J. Gallo and Jean F. Gallo, and is located on the south side of South Plank Road (NYS Route 52), at the intersection of Union Avenue (NYS Route 300) and South Plank Road, in the Business (B) Zoning District. The Property abuts South Plank Road on the north side, Union Avenue on the east side, 203 South Plank Road on the west side, and 1437 Union Avenue on the south side. The adjacent property at 203 South Plank Road is currently used as a CVS Pharmacy with a drive thru pharmacy, and the property located at 1437 Union Avenue consists of a vacant building which is closed and not currently operational.

The Property is currently developed with an approximately 2,691 square-foot, one-story fast-food establishment (specifically, a Dairy Queen) with a drive-thru and 26 parking spaces. Newburgh Chicken seeks to develop the Property with an approximately 2,537 square-foot, one-story fast-food establishment (specifically, a Popeyes Chicken) with a drive-thru and 22 parking spaces. The existing fast-food establishment (Dairy Queen) and drive-thru has been located on the Property for several decades, and, as such, is a legal nonconforming use, as fast-food establishments are not permitted in the Business (B) Zoning District.

At its October 26, 2023 meeting, the Zoning Board of Appeals granted Newburgh Chicken a special permit pursuant to Town Code § 185-19.A(3), which authorizes the proposed nonconforming use to continue on the Property, albeit in a different location and under a new corporate entity. Additionally, in granting the special permit, the Zoning Board determined that the applicable bulk requirements for the project are those which are proposed as part of the development of the Property. Moreover, the Zoning Board granted six (6) area variances to Newburgh Chicken for dimensional requirements that apply to the project, regardless of the fact that the proposed use is not permitted by right in the Business (B) Zoning District.

At this time, Newburgh Chicken respectfully seeks site plan approval from the Planning Board for the proposed Popeyes Chicken. The proposed Popeyes Chicken establishment is appropriate in the community, as a fast-food establishment has existed on the Property for several decades, albeit under a different corporate entity. Moreover, it is appropriate for the Property given its proximity to major corridors such as Interstates 84 and 87 and Route 52. Permitting Newburgh Chicken to develop a Popeyes Chicken on the Property will yield significant benefits to the Town of Newburgh by allowing the continued use of the Property as a fast-food establishment, as has been the case for several decades, and improving the safety of the Property, the traffic flow along South Plank Road, the appearance of the building, and the landscaping and functionality of the Property.

DEMOLITION NOTES

1. ALL DEMOLITION ACTIVITIES ARE TO BE PERFORMED IN STRICT ADHERENCE TO ALL FEDERAL, STATE AND LOCAL REGULATIONS.
2. PROCEED WITH DEMOLITION IN A SYSTEMATIC MANNER, FROM THE TOP OF THE STRUCTURE(S) TO THE GROUND.
3. COMPLETE DEMOLITION WORK ABOVE EACH FLOOR OR TIER BEFORE DISTURBING ANY OF THE SUPPORTING MEMBERS OF THE LOWER LEVELS.
4. DEMOLISH CONCRETE AND MASONRY IN SMALL SECTIONS.
5. REMOVE STRUCTURAL FRAMING MEMBERS AND LOWER THEM TO THE GROUND.
6. BREAK UP CONCRETE SLABS-ON-GRADE, UNLESS OTHERWISE DIRECTED BY OWNER.
7. LOCATE DEMOLITION EQUIPMENT THROUGHOUT THE STRUCTURE AND REMOVE MATERIALS SO AS TO NOT IMPOSE EXCESSIVE LOADS ON SUPPORTING WALLS, FLOORS, OR FRAMING.
8. PROVIDE INTERIOR AND EXTERIOR SHORING, BRACING AND SUPPORTS TO PREVENT MOVEMENT, SETTLEMENT OR COLLAPSE OF STRUCTURES TO BE DEMOLISHED (AND ADJACENT FACILITIES, IF APPLICABLE).
9. DEMOLISH AND REMOVE ALL FOUNDATION WALLS, FOOTINGS AND OTHER MATERIALS WITHIN THE AREA OF THE DESIGNATED FUTURE BUILDING. ALL OTHER FOUNDATION SYSTEMS, INCLUDING BASEMENTS, SHALL BE DEMOLISHED TO A DEPTH OF NOT LESS THAN ONE FOOT BELOW PROPOSED PAVEMENT OR, BREAK BASEMENT FLOOR SLABS. SEAL ALL OPEN UTILITY LINES WITH CONCRETE. CONTRACTOR TO REVIEW STRUCTURE PRIOR TO DEMOLITION TO DETERMINE IF BASEMENT, CRAWL SPACE OR ANY SUB-STRUCTURE EXISTS. ANY SUB-STRUCTURE, INCLUDING BASEMENTS SHALL BE REMOVED IN ITS ENTIRETY OR AS DIRECTED BY OWNER.
10. ERECT AND MAINTAIN COVERED PASSAGEWAYS IN ORDER TO PROVIDE SAFE PASSAGE FOR PERSONS AROUND THE AREA OF DEMOLITION. CONDUCT ALL DEMOLITION OPERATIONS IN A MANNER THAT WILL PREVENT DAMAGE AND PERSONAL INJURY TO STRUCTURES, ADJACENT BUILDINGS AND ALL PERSONS. PLACE THE SAFETY AND PROTECTION OF THE SURROUNDING COMMUNITY AND PROPERTY AT THE HIGHEST PRIORITY.
11. REFRAIN FROM USING ANY EXPLOSIVES WITHOUT PRIOR WRITTEN CONSENT OF OWNER AND APPLICABLE GOVERNMENTAL AUTHORITIES.
12. CONDUCT DEMOLITION SERVICES IN SUCH A MANNER TO ENSURE MINIMUM INTERFERENCE WITH ROADS, STREETS, WALKS AND OTHER ADJACENT FACILITIES. DO NOT CLOSE OR OBSTRUCT STREETS, WALKS, OR OTHER OCCUPIED FACILITIES WITHOUT PRIOR WRITTEN PERMISSION OF OWNER AND ANY APPLICABLE GOVERNMENTAL AUTHORITIES. PROVIDE ALTERNATE ROUTES AROUND CLOSED OR OBSTRUCTED TRAFFIC WAYS, IF REQUIRED BY APPLICABLE GOVERNMENTAL REGULATIONS.
13. USE WATERING, TEMPORARY ENCLOSURES AND OTHER SUITABLE METHODS, AS NECESSARY TO LIMIT THE AMOUNT OF DUST AND DIRT RISING AND SCATTERING IN THE AIR. CLEAN ADJACENT STRUCTURES AND IMPROVEMENTS OF ALL DUST AND DEBRIS CAUSED BY THE DEMOLITION OPERATIONS. RETURN ALL ADJACENT AREAS TO THE CONDITIONS EXISTING PRIOR TO THE START OF WORK.
14. ACCOMPLISH AND PERFORM THE DEMOLITION IN SUCH A MANNER AS TO PREVENT THE UNAUTHORIZED ENTRY OF PERSONS AT ANY TIME.
15. COMPLETELY FILL BELOW GRADE AREAS AND VOIDS RESULTING FROM THE DEMOLITION OF STRUCTURES AND FOUNDATIONS WITH SOIL MATERIALS IN ACCORDANCE WITH THE GEOTECHNICAL REPORT, CONSISTING OF STONE, GRAVEL AND SAND, FREE FROM DEBRIS, TRASH, FROZEN MATERIALS, ROOTS AND OTHER ORGANIC MATTER. STONES USED WILL NOT BE LARGER THAN 6 INCHES IN DIMENSION. MATERIAL FROM DEMOLITION MAY NOT BE USED AS FILL PRIOR TO PLACEMENT OF FILL MATERIALS. UNDERTAKE ALL NECESSARY ACTION IN ORDER TO ENSURE THAT AREAS TO BE FILLED ARE FREE OF STANDING WATER, FROST, FROZEN MATERIAL, TRASH, DEBRIS. PLACE FILL MATERIALS IN HORIZONTAL LAYERS NOT EXCEEDING 6 INCHES IN LOOSE DEPTH AND COMPACT EACH LAYER AT PLACEMENT TO 95% OPTIMUM DENSITY. GRADE THE SURFACE TO MEET ADJACENT CONTOURS AND TO PROVIDE SURFACE DRAINAGE.
16. REMOVE FROM THE DESIGNATED SITE, AT THE EARLIEST POSSIBLE TIME, ALL DEBRIS, RUBBISH, SALVAGEABLE ITEMS, HAZARDOUS AND COMBUSTIBLE SERVICES. REMOVED MATERIALS MAY NOT BE STORED, SOLD OR BURNED ON THE SITE. REMOVAL OF HAZARDOUS AND COMBUSTIBLE MATERIALS SHALL BE ACCOMPLISHED IN ACCORDANCE WITH THE PROCEDURES AS AUTHORIZED BY THE FIRE DEPARTMENT OR OTHER APPROPRIATE REGULATORY AGENCIES AND AUTHORITIES.
17. DISCONNECT, SHUT OFF AND SEAL IN CONCRETE ALL UTILITIES SERVING THE STRUCTURE(S) TO BE DEMOLISHED BEFORE THE COMMENCEMENT OF THE DESIGNATED DEMOLITION. MARK FOR POSITION ALL UTILITY DRAINAGE AND SANITARY LINES AND PROTECT ALL ACTIVE LINES. CLEARLY IDENTIFY BEFORE THE COMMENCEMENT OF DEMOLITION SERVICES THE REQUIRED INTERRUPTION OF ACTIVE SYSTEMS THAT MAY AFFECT OTHER PARTIES, AND NOTIFY ALL APPLICABLE UTILITY COMPANIES TO ENSURE THE CONTINUATION OF SERVICE.
18. THIS DEMOLITION PLAN IS INTENDED TO IDENTIFY THOSE EXISTING CONDITIONS WHICH ARE TO BE REMOVED. IT IS NOT INTENDED TO PROVIDE DIRECTION OTHER THAN THAT ALL PROCEDURES ARE TO BE IN ACCORDANCE WITH STATE, FEDERAL, LOCAL, AND JURISDICTIONAL REQUIREMENTS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL SAFETY PRECAUTIONS NECESSARY.
19. VERIFY THAT ALL ENVIRONMENTAL CONCERNS INCLUDING BUT NOT LIMITED TO ASBESTOS, LEAD BASED PAINT, HAZMAT MATERIALS, UNDERGROUND STORAGE TANKS, AND TRANSFORMERS HAVE BEEN REMOVED PRIOR TO COMMENCEMENT OF DEMOLITION ACTIVITIES. THESE ARE NOT SHOWN ON THE PLANS. REFER TO ENVIRONMENTAL REPORTS AND DOCUMENTS FOR LOCATIONS AND DISPOSAL PROCEDURES.

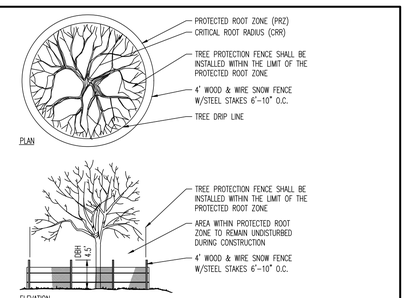
4. ALL EXISTING DEBRIS SHALL BE REMOVED BY CONTRACTOR IN ACCORDANCE WITH MUNICIPAL AND LOCAL UTILITY COMPANY REQUIREMENTS.



ESTIMATE A TREE'S PROTECTED ROOT ZONE (PRZ) BY CALCULATING THE CRITICAL ROOT RADIUS (CRR)
1. MEASURE THE DBH (DIAMETER OF TREE AT BREAST HEIGHT, 4.5' ABOVE GROUND ON THE UPHILL SIDE OF TREE) IN INCHES.
2. MULTIPLY MEASURED DBH BY 1.5 OR 1.0. EXPRESS THE RESULT IN FEET

DBH x 1.5: CRITICAL ROOT RADIUS FOR OLDER, UNHEALTHY, OR SENSITIVE SPECIES.
DBH x 1.0: CRITICAL ROOT RADIUS FOR YOUNGER, HEALTHY OR TOLERANT SPECIES.

A. THE TOTAL ALLOWABLE SIGN AREA FOR ALL PERMANENT SIGNS ON THE SITE, EXCEPT FREESTANDING SIGNS, SHALL BE AS FOLLOWS:

i. IF THERE IS NO FREESTANDING SIGN ON THE SITE, THEN ONE (1) SQUARE FOOT OF SIGN AREA PER LINEAR FOOT OF BUILDING WALL THAT FRONTS ON A STREET IS ALLOWED. (§ 185-14.M.(1)(a)(1))

ii. IF THERE IS A FREESTANDING SIGN ON THE SITE, THEN 3/4 SQUARE FOOT OF SIGN AREA PER LINEAR FOOT OF BUILDING WALL THAT FRONTS ON A STREET IS ALLOWED. (§ 185-14.M.(1)(a)(2))

B. THERE IS NO LIMIT ON THE NUMBER OF SUCH SIGNS ON A SITE SO LONG AS THEIR AGGREGATE SQUARE FOOTAGE IS WITHIN THE TOTAL ALLOWABLE AREA LIMIT. (§ 185-14.M.(1)(b))

ANY NEW SERVICE IS TO BE COORDINATED AND VERIFIED FOR LOCATION WITH THE LOCAL GAS COMPANY. THE CONTRACTOR SHALL OBTAIN ALL REQUIRED STREET OPENING PERMITS FOR REMOVAL OF EXISTING SERVICE AND INSTALLATION OF NEW SERVICE.

SANITARY SEWER SERVICE NOTE: CONTRACTOR TO LOCATE AND UTILIZE EXISTING SEWER SERVICE CONNECTION IF OF ADEQUATE SIZE AND INTEGRITY AND ACCEPTABLE TO LOCAL SEWER AUTHORITY. OTHERWISE CONTRACTOR TO REMOVE EXISTING SEWER SERVICE LINE AND CAP AT MAIN IN R.O.W. IN ACCORDANCE WITH THE LOCAL SEWER AUTHORITY REQUIREMENTS. TERMINATION AT THE MAIN MUST BE APPROVED BY THE LOCAL SEWER AUTHORITY PRIOR TO COMPLETION. IF EXISTING SEWER SERVICE CAN NOT BE UTILIZED THEN THE NEW SERVICE IS TO BE COORDINATED AND VERIFIED FOR LOCATION WITH THE LOCAL SEWER AUTHORITY. CONTRACTOR SHALL OBTAIN ALL REQUIRED STREET OPENING PERMITS FOR REMOVAL OF EXISTING SERVICE AND INSTALLATION OF NEW SERVICE.

UTILITY NOTES

1. LOCATION OF ALL EXISTING AND PROPOSED SERVICES ARE APPROXIMATE AND MUST BE CONFIRMED INDEPENDENTLY WITH LOCAL UTILITY COMPANIES PRIOR TO COMMENCEMENT OF ANY CONSTRUCTION OR EXCAVATION. SANITARY SEWER AND ALL OTHER UTILITY SERVICE CONNECTION POINTS SHALL BE CONFIRMED INDEPENDENTLY BY THE CONTRACTOR IN FIELD PRIOR TO THE COMMENCEMENT OF CONSTRUCTION. ALL DISCREPANCIES SHALL BE REPORTED IMMEDIATELY IN WRITING TO THE ENGINEER. CONSTRUCTION SHALL COMMENCE BEGINNING AT THE LOWEST INVERT (POINT OF CONNECTION) AND PROGRESS UP GRADIENT. INTERFACE POINTS (CROSSINGS) WITH EXISTING UNDERGROUND UTILITIES SHALL BE FIELD VERIFIED BY TEST PIT PRIOR TO COMMENCEMENT OF CONSTRUCTION.
2. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO NOTIFY UTILITY "ONE-CALL" NUMBER 72 HOURS PRIOR TO ANY EXCAVATION ON THIS SITE. CONTRACTOR SHALL ALSO NOTIFY LOCAL WATER & SEWER DEPARTMENTS TO MARK-OUT THEIR UTILITIES.
3. REFER TO ARCHITECTURAL DRAWINGS FOR EXACT BUILDING UTILITY CONNECTION LOCATIONS. WHERE CONFLICTS EXIST WITH THESE SITE PLANS, ENGINEER IS TO BE NOTIFIED PRIOR TO CONSTRUCTION TO RESOLVE SAME. SERVICE SIZES TO BE DETERMINED BY ARCHITECT.
4. WATER SERVICE MATERIALS SHALL BE SPECIFIED BY THE LOCAL UTILITY COMPANY. CONTRACTORS PRICE FOR WATER SERVICE SHALL INCLUDE ALL FEES AND APPURTENANCES REQUIRED BY THE UTILITY TO PROVIDE A COMPLETE WORKING SERVICE.
5. ALL WATER MAIN SHALL BE CEMENT-LINED, CLASS 52 DUCTILE IRON PIPE, UNLESS OTHERWISE DESIGNATED.
6. THE MINIMUM DIAMETER FOR DOMESTIC WATER SERVICES SHALL BE 1 INCH.
7. ALL SANITARY SEWER MAINS SHALL BE SEPARATED FROM WATER MAINS BY A DISTANCE OF AT LEAST 10 FEET HORIZONTALLY. IF SUCH SEPARATION IS NOT POSSIBLE, THE PIPES SHALL BE IN SEPARATE TRENCHES WITH THE SEWER MAIN AT LEAST 18 INCHES BELOW THE WATER MAIN OR SUCH OTHER SEPARATION AS APPROVED BY THE APPROVING AUTHORITY. WHERE APPROPRIATE CROSSING SEPARATION FROM A WATER MAIN IS NOT POSSIBLE, THE SEWER SHALL BE ENCASED IN CONCRETE, OR CONSTRUCTED OF DUCTILE IRON PIPE USING MECHANICAL OR SLIP-ON JOINTS FOR A DISTANCE OF AT LEAST 10 FEET ON EITHER SIDE OF THE CROSSING. IN ADDITION, ONE FULL LENGTH OF SEWER PIPE SHOULD BE LOCATED SO BOTH JOINTS WILL BE AS FAR FROM THE WATER MAIN AS POSSIBLE. WHERE A WATER MAIN CROSSES UNDER A SEWER, ADEQUATE STRUCTURAL SUPPORT FOR THE SEWER SHALL BE PROVIDED. THE APPROVING AUTHORITY MAY REQUIRE ADDITIONAL STRUCTURAL SUPPORT FOR STORM SEWER CROSSING OVER SEWER LINES.
8. ALL SANITARY SEWER MAINS SHALL BE SDR-35 PVC PIPE MATERIAL UNLESS OTHERWISE DESIGNATED. SEWER PIPES INSTALLED WITH LESS THAN 3 FEET OF COVER, GREATER THAN 20 FEET OF COVER OR WITHIN 18 INCHES OF A WATER MAIN SHALL BE CONSTRUCTED OF DUCTILE IRON PIPE. ALL DUCTILE IRON SEWER PIPE SHALL BE CEMENT-LINED, CLASS 52 PIPE, FURNISHED WITH SEWER COAT, OR APPROVED EQUAL.
9. WHERE SANITARY SEWER LATERALS ARE GREATER THAN 10' DEEP AT CONNECTION TO THE SEWER MAIN, CONCRETE DEEP LATERAL CONNECTIONS ARE TO BE UTILIZED.
10. THE CONTRACTOR IS RESPONSIBLE FOR THE STABILIZATION OF THE EXISTING SEWER MAIN, STRUCTURES AND APPURTENANCES DURING CONNECTION.
11. LOCATION & LAYOUT OF GAS, ELECTRIC & TELECOMMUNICATION UTILITY LINES AND SERVICES SHOWN ON THESE PLANS ARE SCHEMATIC IN NATURE. ACTUAL LOCATION & LAYOUT OF THESE UTILITIES & SERVICES ARE TO BE PER THE APPROPRIATE UTILITY PROVIDER.

MANUFACTURED REINFORCED CONCRETE ELLIPTICAL STORM PIPE TO CONFORM TO ASTM C-507, CLASS HE-III, UNLESS OTHERWISE DESIGNATED. REINFORCED CONCRETE STORMWATER PIPE TO BE INSTALLED IN ACCORDANCE WITH AMERICAN CONCRETE PIPE ASSOCIATION INSTALLATION GUIDELINES AND MORTAR OR PREFORMED FLEXIBLE JOINT SEALANTS IN ACCORDANCE WITH ASTM C 990 TO BE UTILIZED TO PROVIDE A SILT-TIGHT JOINT. WHERE SPECIFICALLY INDICATED, REINFORCED CONCRETE STORM PIPE JOINTS SHALL BE WATERTIGHT AND CONFORM TO ASTM C-443.
16. HDPE DRAINAGE PIPE SHALL HAVE A SMOOTH WALL INTERIOR WITH ANNULAR EXTERIOR CORRUGATIONS AND CONFORM TO ASTM F2306. SOLID PIPE SHALL HAVE GASKETED WATER-TIGHT JOINTS MEETING THE REQUIREMENTS OF ASTM F2306 AND ASTM D3212. PERFORATED PIPE SHALL HAVE GASKETED SILT-TIGHT JOINTS MEETING THE REQUIREMENTS OF ASTM F2306 AND ASTM F477. TOWN OF NEWBURGH LANDSCAPE REQUIREMENTS

1. NO PERSON SHALL, PRIOR TO THE ISSUANCE OF A CLEARING AND GRADING PERMIT, A STORMWATER MANAGEMENT PLAN APPROVAL OR SITE PLAN, SPECIAL PERMIT OR SUBDIVISION APPROVAL, CONDUCT CLEAR CUTTING OR WHOLESALE TREE CUTTING ACTIVITIES ON ANY PROPERTY WITHIN THE TOWN, UNLESS SUCH ACTIVITY IS EXEMPT UNDER THE PROVISIONS OF THE APPLICABLE CHAPTER. A VIOLATION OF THIS PROVISION SHALL CONSTITUTE SUFFICIENT GROUNDS FOR THE TOWN TO REFUSE TO GRANT A CLEARING AND GRADING PERMIT, STORMWATER APPROVAL OR OTHER DEVELOPMENT PERMIT OR APPROVAL. THIS PROVISION SHALL NOT BE CONSTRUED TO PERMIT CLEAR CUTTING OR WHOLESALE TREE CUTTING FOLLOWING ISSUANCE OF THE APPLICABLE PERMIT OR APPROVAL EXCEPT IN COMPLIANCE WITH ALL APPLICABLE PROVISIONS OF LAW AND PERMIT CONDITIONS. (§ 172-4.A)
2. NO PERSON CAUSING OR PERFORMING DEVELOPMENT ACTIVITIES IN NONRESIDENTIAL ZONING DISTRICTS (B, IB AND I UNDER CHAPTER 185, ZONING) SHALL REMOVE OR DISTURB MORE THAN SEVENTY-FIVE PERCENT (75%) OF THE TOTAL INCHES IN DIAMETER OF SIGNIFICANT TREES. ANY REMOVAL OR DISTURBANCE BEYOND THIS THRESHOLD SHALL REQUIRE REFORESTATION OR RESTITUTION AS HEREINAFTER PROVIDED. IN THE EVENT THAT THE PARCEL IS ONE (1) ACRE OR LESS AND HAS NOT BEEN SUBJECT TO REVIEW UNDER THIS CHAPTER IN CONJUNCTION WITH THE SUBDIVISION OF A PARENT PARCEL, THEN THE STANDARD SHALL BE NINETY PERCENT (90%) RATHER THAN SEVENTY-FIVE PERCENT (75%) FOR SIGNIFICANT TREES. (§ 172-4.C)
3. NO PERSON SHALL REMOVE OR DISTURB ANY SPECIMEN TREE UNLESS SUCH TREE IS LOCATED WITHIN THE BUILDABLE AREA ON LOTS LESS THAN FIVE (5) ACRES IN SIZE OR UNLESS SUCH TREE IS LOCATED WITHIN THE BUILDING AREA AND MINIMUM REQUIRED PARKING AREA(S) ON LOTS FIVE (5) OR MORE ACRES IN SIZE, OR IN RIGHTS OF WAY IN WHICH DRIVEWAYS OR STREETS ARE BEING CONSTRUCTED. EVERY EFFORT SHALL BE MADE TO AVOID DAMAGE TO OR REMOVAL OF SUCH TREE OR TREES. THE OWNER AND APPLICANT SHALL HAVE PROVIDED THE TOWN WITH EVIDENCE TO ESTABLISH THAT IT IS NOT FEASIBLE TO RELOCATE THE BUILDING AREA, PARKING AREA, DRIVEWAYS, STORMWATER CONTROL FACILITIES AND OTHER IMPROVEMENTS BASED UPON THE PHYSICAL CHARACTERISTICS OR CONDITION OF THE LOT OR THAT SUCH RELOCATION CREATES UNDUE HARDSHIP AND FINANCIAL EXPENSE. (§ 172-4.D)
4. A TOPPING SHALL BE CONSIDERED A REMOVAL IF PERFORMED ON A SPECIMEN TREE WITHOUT PRIOR APPROVAL OF THE AUTHORIZED OFFICIAL OR HIS DESIGNEE. THIS FORM OF PRUNING IS NOT AN INDUSTRY ACCEPTED PRACTICE AND THEREFORE SHOULD NOT BE USED EXCEPT IN EXTRAORDINARY CIRCUMSTANCES. (§ 172-4.E)
5. EVERY EFFORT SHALL BE MADE TO AVOID REMOVAL OF TREES FROM VERNAL POOLS AND A SURROUNDING BUFFER AREA AT LEAST TWENTY (20) FEET IN WIDTH. (§ 172-4.F)
6. NO DEVELOPMENT ACTIVITY SHALL OCCUR WITHIN THE AREA ENCOMPASSED BY THE CRITICAL ROOT ZONE OF ANY TREE THAT IS TO BE PRESERVED. NO EXCESS SOIL, ADDITIONAL FILL, LIQUIDS, OR CONSTRUCTION DEBRIS SHALL BE PLACED WITHIN THE AREA ENCOMPASSED BY THE CRITICAL ROOT ZONE OF ANY TREE THAT IS TO BE PRESERVED. (§ 172-10.B)

TOWN OF NEWBURGH LANDSCAPE REQUIREMENTS

A. ALL OPEN PARKING AREAS SHALL BE SUITABLY LANDSCAPED. IN PARKING LOTS WITH MORE THAN TWENTY (20) SPACES, AT LEAST FIVE PERCENT (5%) OF THE AREA OF THE PARKING LOT SHALL BE DEVOTED TO LANDSCAPING WITHIN THE INTERIOR OF THE PARKING LOT. SUCH LANDSCAPING SHALL BE IN ADDITION TO THAT WHICH MAY BE REQUIRED ALONG THE STREET LINE, THE LOT LINES OR THE BUILDING FOUNDATION. IN ALL PARKING LOTS PROVIDING EIGHT (8) OR MORE OFF-STREET PARKING SPACES, ONE (1) SHADE OR FLOWERING ORNAMENTAL TREE SHALL BE PLANTED FOR EACH EIGHT (8) PARKING SPACES AND ANY ADDITIONAL NUMBER THEREOF, SAID TREE OR TREES TO BE PLANTED IN MEDIAN DIVIDERS, ISLANDS OR SUCH OTHER LOCATIONS AS MAY BE ACCEPTABLE TO THE PLANNING BOARD. (§ 185-13.D.(9)(a)) **(COMPLIES)**
B. ALL PLANTING BEDS, LANDSCAPED ISLANDS AND PEDESTRIAN WALKWAYS, IF PROVIDED, SHALL BE PROTECTED BY CURBS, STURDY POSTS, RAILS OR WALLS ONE AND ONE-HALF TO TWO (1.5 – 2) FEET IN HEIGHT OR OTHER PROTECTIVE DEVICES AND SHALL BE OF SUFFICIENT WIDTH TO PREVENT DAMAGE OR INJURY TO BOTH PLANT MATERIALS AND PEDESTRIANS. ADDITIONAL BARRIERS MAY BE REQUIRED BY THE PLANNING BOARD TO GIVE BETTER PROTECTION AND TO IMPROVE PEDESTRIAN AND VEHICULAR CIRCULATION (§ 185-13.D.(9)(b)) **(COMPLIES)**

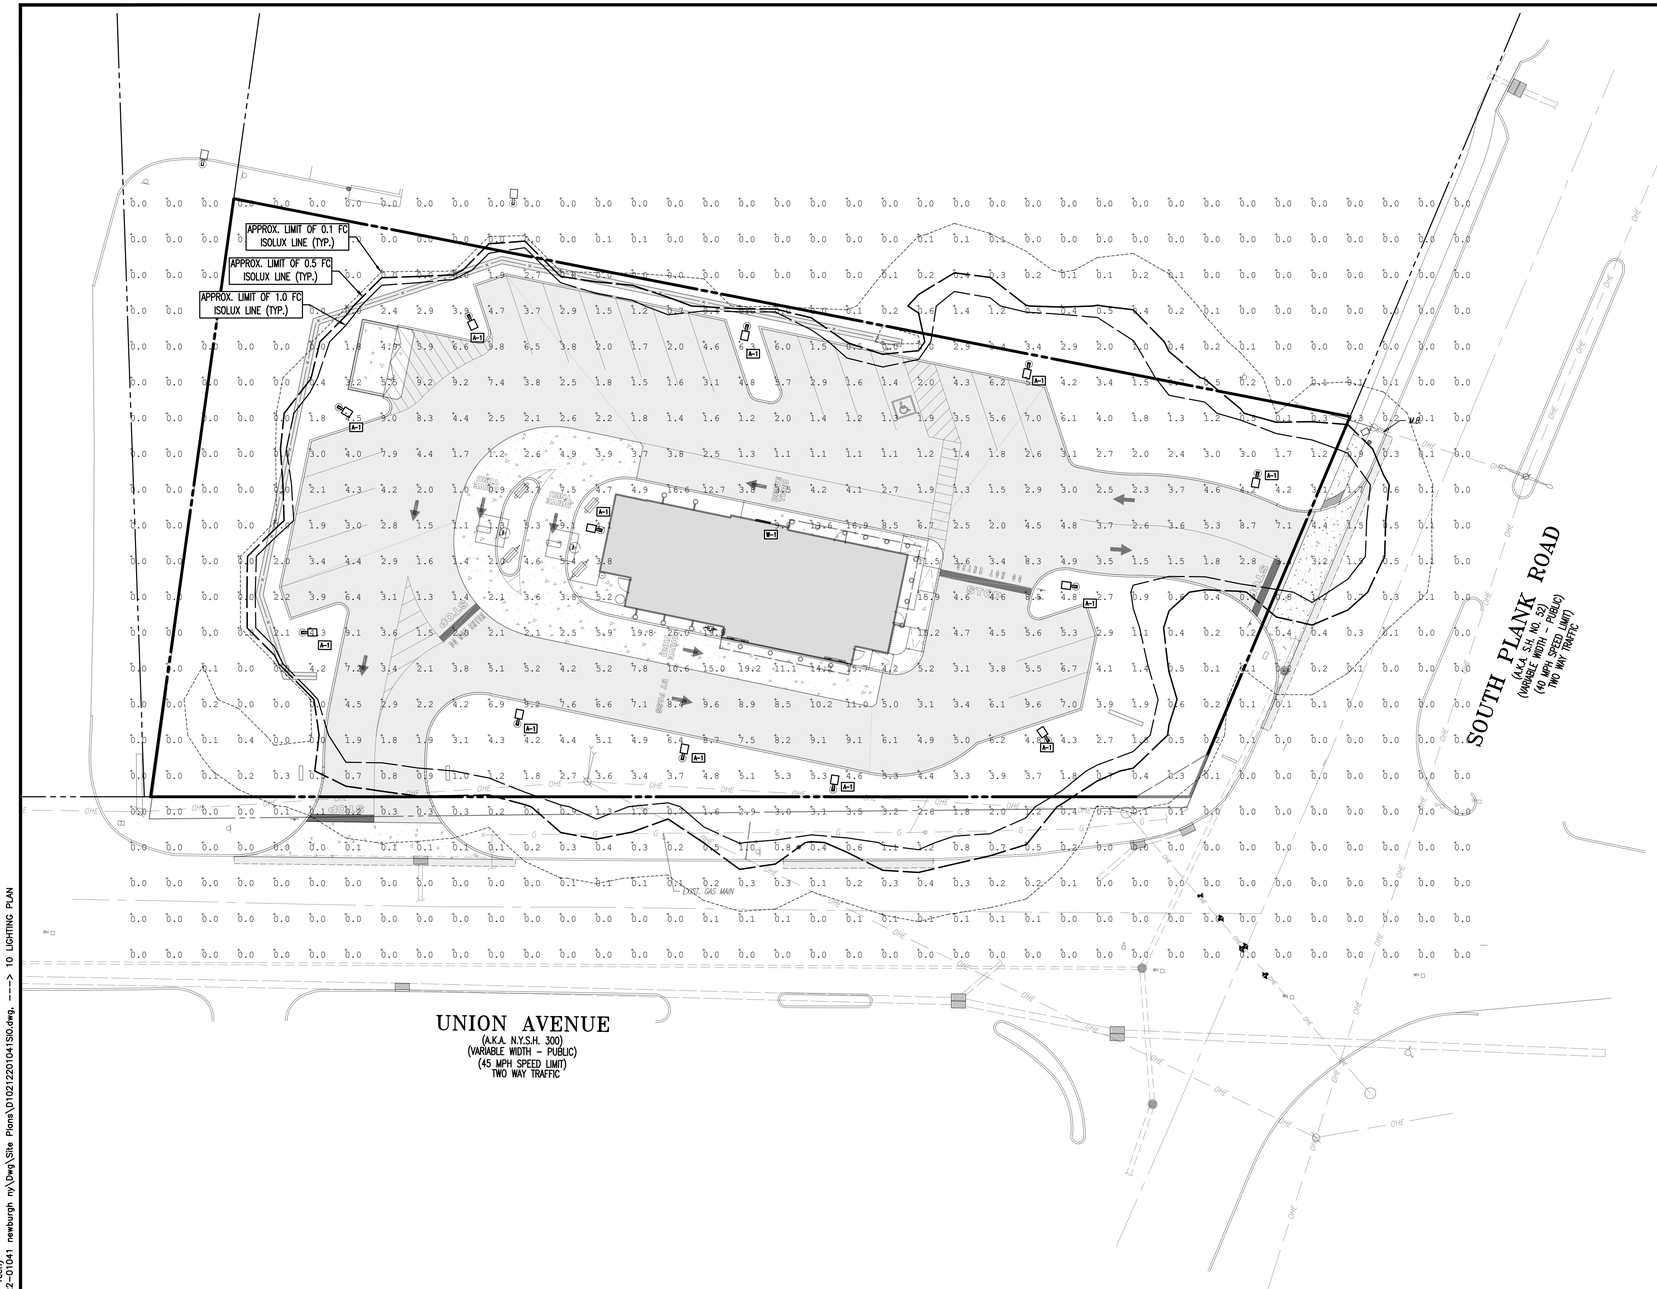
THIS PLAN TO BE UTILIZED FOR LIGHTING PURPOSES ONLY



LIGHTING NOTES

1. THE AREA OF BRILLIANCE, CHARACTER, COLOR, DEGREE, DENSITY, INTENSITY, LOCATION AND TYPE OF ILLUMINATION SHALL BE THE MINIMUM NECESSARY TO PROVIDE FOR THE SECURITY OF THE PROPERTY AND THE SAFETY AND WELFARE OF THE PUBLIC. (§125-8.A) **(COMPLIES)**
2. ALL SOURCES OF ILLUMINATION ON NONPUBLIC PROPERTY, INCLUDING THE LIGHTING OF SIGNS, SHALL BE SHIELDED OR DIRECTED IN SUCH A MANNER THAT THE DIRECT RAYS THEREFROM ARE NOT CAST UPON ANY PROPERTY USED FOR RESIDENTIAL PURPOSES, OTHER THAN THE LOT ON WHICH SUCH ILLUMINATION IS SITUATED. (§125-8.B) **(COMPLIES)**
3. ILLUMINATION SHALL BE STEADY IN NATURE, NOT FLASHING, MOVING OR CHANGING IN BRILLIANCE, COLOR OR INTENSITY, EXCLUDING THE LIGHTING OF SIGNS CONVEYING INFORMATION, SUCH AS TIME AND TEMPERATURE. (§125-8.C) **(COMPLIES)**
4. THE DURATION, PERIOD OR TIME OF ILLUMINATION OF NONRESIDENTIAL PREMISES SHALL BE THE MINIMUM NECESSARY TO PROVIDE FOR THE SECURITY OF THE PROPERTY AND THE SAFETY AND WELFARE OF THE PUBLIC. FOR NONRESIDENTIAL PREMISES OPEN TO THE PUBLIC, ILLUMINATION SHALL BE EXTINGUISHED, EXCEPT THAT NECESSARY FOR THE SECURITY OF THE PROPERTY AND SAFETY OF PERSONS THEREON, ONE (1) HOUR AFTER THE PREMISES ARE CLOSED TO THE PUBLIC. (§125-8.D) **(COMPLIES)**
5. ILLUMINATION CONNECTED OR USED WITH A SIGN OR OTHERWISE WHICH COMPETES FOR ATTENTION WITH OR MAY BE MISTAKEN FOR A TRAFFIC SIGNAL OR CREATES A DISTRACTIVE HAZARD TO TRAFFIC BY GLARE OR MOVEMENT IS PROHIBITED. (§125-8.E) **(COMPLIES)**

GENERAL NOTES

1. THIS LIGHTING PLAN ILLUSTRATES ILLUMINATION LEVELS CALCULATED FROM LABORATORY DATA TAKEN UNDER CONTROLLED CONDITIONS IN ACCORDANCE WITH ILLUMINATING ENGINEERING SOCIETY OF NORTH AMERICA (IESNA) APPROVED METHODS. ACTUAL SITE ILLUMINATION LEVELS AND PERFORMANCE OF LUMINARIES MAY VARY DUE TO VARIATIONS IN WEATHER, ELECTRICAL VOLTAGE, TOLERANCE IN LAMPS, AND OTHER RELATED VARIABLE FIELD CONDITIONS.
2. ALL EXISTING CONDITIONS LIGHTING LEVELS ARE REPRESENTATIVE OF AN APPROXIMATION UTILIZING LABORATORY DATA FOR SIMILAR FIXTURES AND/OR ACTUAL FIELD MEASUREMENTS TAKEN WITH A LIGHT METER. DUE TO FACTORS SUCH AS FIXTURE MAINTENANCE, EQUIPMENT TOLERANCES, WEATHER CONDITIONS, ETC., ACTUAL LIGHTING LEVELS MAY DIFFER AND THE LIGHTING LEVELS DEPICTED ON THIS PLAN SHOULD BE CONSIDERED AS APPROXIMATE.
3. CONDUITS SHALL BE INSTALLED A MINIMUM OF 2 FEET BEHIND GUIDERAIL POSTS.

- Drainage Area Maps

SITE DESCRIPTION

The subject site is identified as Parcel 60-3-6.1 located at 197 South Plank Road, in the Town of Newburgh in Orange County, New York and has a total area of approximately 42,212 SF (0.97 Ac). Under existing conditions, the site consists of a one-story fast-food restaurant. The existing conditions of the site have been verified by the ALTA/NSPS Land Title Survey as prepared by Gallas Surveying Group, LLC, dated 10/07/2022.

DESIGN OVERVIEW

This report has been prepared to define and analyze the stormwater drainage conditions that would occur as a result of development of the subject site into a proposed fast-food restaurant with drive-through. The scope of the study includes the demolition of the existing building and construction of a new fast-food restaurant. Additional improvements include parking, grading, landscaping, lighting, utilities, and other associated site improvements as shown on the accompanying engineering drawings.

The project maintains a limit of disturbance of 0.99 Ac and is therefore not subject to the requirements set forth by the NYS SWDM. However, the project proposes an increase in impervious coverage from approximately 20,837 SF (0.48 Ac) to 25,649 SF (0.59 Ac). Therefore, the project will mitigate this increase in impervious cover by addressing the below unified stormwater sizing criteria:

1. Channel Protection Volume (CPv) – 1-Year Rainfall Event
2. Overbank Flood Volume (Qp) – 10-Year Rainfall Event
3. Extreme Storm Volume (Qf) – 100-Year Rainfall Event

The project's proposed stormwater management system includes an underground detention system, and a manufactured treatment device (MTD) to mitigate the storm events, designed and developed in conformance with the current New York State Stormwater Management Design Manual (NYS SWDM) to provide adequate mitigation measures to satisfy the requirements of the unified stormwater sizing criteria outlined above.

At this time, a geotechnical stormwater investigation for basin area has not been completed. Instead, the soil characteristics were modeled referencing soil type, cover, and seasonal high water table information from NRCS Web Soil Survey. As outlined above, the stormwater management system has been designed to provide water quantity controls.

The proposed stormwater management system has been designed to provide water quality treatment and storage to provide zero net increase in peak discharges to the point of interest for the 1-, 10-, and 100-year storm events.

EXISTING DRAINAGE CONDITIONS

The area to be analyzed consists of approximately 1.109 acres and is comprised of impervious and open space. Presently, all stormwater runoff generated by the subject site is tributary to the stormwater conveyance infrastructure located within the South Plank Road right-of-way.

The subject site has been evaluated with the following drainage sub-watershed areas as depicted on the Existing Drainage Area Map included within the Appendix of this report.

Study Area S Plank Road (Undetained): This area consists of the entire parcel, which includes open space and impervious areas such as vehicular traveled impervious areas and roof runoff. Stormwater runoff generated by

this area is tributary to the existing stormwater conveyance system located at the intersection of South Plank Road and Union Avenue.

Based upon the Orange County Soil Survey, the soil types native to the study area include:

SOIL TYPE (SYMBOL)	SOIL TYPE (NAME)	HYDROLOGIC SOIL GROUP
UH	Udorthents, smoothed	A

PROPOSED DRAINAGE CONDITIONS

The proposed stormwater management system includes an underground detention system which consists of 36" pipes to detain and mitigate stormwater runoff generated by the development in order to meet the stormwater management requirements set forth by the NYS SWDM. A manufactured treatment device is also proposed to treat all vehicular tracked impervious surface on-site prior to detention and discharge.

The proposed site conditions have been evaluated using the following drainage sub-watershed areas as depicted on the Proposed Drainage Area Map included within the Appendix of this report.

Study Area S Plank Road (Detained): This area includes the majority of the parcel, which consists of open space and impervious areas, such as vehicular traveled impervious areas and roof runoff. Stormwater runoff generated by this area is tributary to the existing stormwater conveyance system at the intersection of South Plank Road and Union Avenue via a proposed outlet conveyance pipe.

Study Area S Plank Road (Undetained): This area consists of on-site impervious and pervious areas that are not detained via the proposed inlet conveyance system. Stormwater runoff generated by this area is tributary to the existing stormwater conveyance system at the intersection of South Plank Road and Union Avenue via overland flow.

DESIGN METHODOLOGY

In order to prepare the stormwater management design for the subject site, extensive initial investigation of the property and topography was performed. On-site review of the tract was initially performed by Dynamic Engineering Consultants, PC to verify existing site conditions and land cover characteristics. Gallas Surveying Group, LLC. was contracted to prepare the ALTA/NSPS Land Title Survey to depict the existing site conditions.

Based on our review of the existing site conditions and survey, the Drainage Area Maps for the existing and proposed site conditions as defined within this report were established. A grading plan was developed for the proposed site improvements with consideration to the existing drainage patterns. The plan was designed to ensure runoff from the proposed development could be directed to the proposed stormwater management facilities in order to address the applicable sections of the NYS SWDM. The rainfall data utilized for the analysis of the existing and proposed drainage conditions is based upon the NYS SWDM.

Under proposed conditions, the stormwater runoff from the subject site and surrounding areas is conveyed by overland flow for collection by the on-site stormwater conveyance system and routed to the proposed underground detention basin. The stormwater management system has been designed to provide water quality treatment and storage to provide zero net increase in peak discharges to the point of interest for the 1-, 10- and 100-year storm events.

WATER QUANTITY (PEAK FLOW ATTENUATION)

Water quantity control practices to provide zero net increase in stormwater runoff for the Channel Protection Volume (CPv), Overbank Flood Control (Qp) and Extreme Flood Control (Qf) storm events have been provided. Pre- and post-construction models are detailed below:

Existing vs Proposed Peak Runoff Conditions				
Design Storm	**Existing Peak Runoff (CFS)**	**Proposed Peak Runoff (CFS)**	**Difference (Proposed – Existing) (CFS)**	**Proposed Water Surface Elev.**
1-Year (CPv))	1.47	1.36	-0.11	358.89
10-Year (Qp)	2.90	2.73	-0.17	359.53
100-Year (Qf)	6.43	6.33	-0.10	360.53

Pre-development and post-development analyses share the same points of interest, so direct comparisons between the hydrologic models can be made.

CONCLUSION

The proposed development has been designed with provisions for the safe and efficient control of stormwater runoff in a manner that will not adversely impact the existing drainage patterns, adjacent roadways, or adjacent parcels. The drainage analysis, stormwater modeling, and associated mitigation plans fully address the adverse impacts previously noted, and comply with all local and state stormwater design requirements by satisfying the unified stormwater criteria outlined in the report above.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

INTRODUCTION

It is proposed to construct a Popeye's restaurant with drive-thru on a parcel of land currently developed with a Dairy Queen, located on the southwest corner of the intersection of Union Avenue (NYS Route 300) and South Plank Road (NYS Route 52) in the Town of Newburgh, Orange County, New York (see Figure 1 in Appendix A). The site is designated as Parcel 60 – 3 - 6.1 on the Town of Newburgh Tax Maps. The existing use consists of a building with a 2,342 SF Dairy Queen. It is proposed to raze the existing site and construct a 2,537 SF Popeye's Restaurant ("The Project"). The site is located within the Zone B – Business Zone. Access to the site is currently provided via an enter only driveway along South Plank Road (NYS Route 52) and a full movement driveway along Union Avenue (NYS Route 300). It is proposed to close the existing access points and provide access to the site via a new full movement driveway along Union Avenue (NYS Route 300) and a full movement driveway along South Plank Road (NYS Route 52).

Dynamic Traffic LLC has been retained to prepare this study to assess the traffic impact associated with the construction of The Project on the adjacent roadway network. This study documents the methodology, analyses, findings and conclusions of our study and includes:

- A detailed field inspection was conducted to obtain an inventory of existing roadway geometry, traffic control, and location and geometry of existing driveways and intersections.

- Existing traffic data was collected via manual turning movement (MTM) counts during the weekday PM, and Saturday midday peak periods at the intersection of South Plank Road (NYS Route 52) and Union Avenue (NYS Route 300).

- Projections of traffic to be generated by the proposed development were prepared utilizing trip generation data as published by the Institute of Transportation Engineers. Site traffic was then assigned to the adjacent street system based upon the anticipated directional distribution.

- Capacity analyses were conducted for the Existing, No Build, and Build conditions for the study intersections.

- The proposed points of ingress and egress were inspected for adequacy of geometric design, spacing and/or alignment to streets and driveways on the opposite side of the street, relationship to other driveways adjacent to the development, and conformance with accepted design standards.

- The site plan as designed was reviewed for sufficiency in accommodating large wheel base vehicles such as delivery trucks, refuse trucks, and emergency vehicles.

- The parking layout and supply was assessed based on accepted design standards, local requirements, and demand experienced at similar developments.

EXISTING CONDITIONS

A review of the existing roadway conditions near the proposed site was conducted to provide the basis for assessing the traffic impact of the development. This included field investigations of the surrounding roadways and intersections, collection of traffic volume data, and extensive analyses.

Existing Roadway Conditions

The following are descriptions of the roadways in the study area:

Union Avenue (NYS Route 300) is an Urban Minor Arterial roadway under NYSDOT jurisdiction with a general north/south orientation. In the vicinity of the site the posted speed limit is 40 MPH and the roadway provides one travel lane in each direction with a two-way center left-turn lane south of the intersection with South Plank Road (NYS Route 52). On-street parking is not permitted. Curb and sidewalk are provided in the vicinity of the intersection with South Plank Road (NYS Route 52). Union Avenue (NYS Route 300) provides a straight horizontal alignment along the site frontage and a general downgrade from north to south. The land uses along Union Avenue (NYS Route 300) in the vicinity of The Project are primarily commercial.

South Plank Road (NYS Route 52) is an Urban Minor Arterial roadway under NYSDOT jurisdiction with a general east/west orientation. In the vicinity of the site the posted speed limit is 40 MPH and the roadway provides one travel lane in each direction. On-street parking is not permitted. Curb and sidewalk are provided in the vicinity of the intersection with Union Avenue (NYS Route 300). South Plank Road (NYS Route 52) provides a straight horizontal alignment along the site frontage and a relatively flat vertical alignment. The land uses along South Plank Road (NYS Route 52) in the vicinity of The Project are primarily commercial.

Existing Traffic Volumes

Manual turning movement (MTM) counts were conducted on Thursday, October 20, 2022 from 4:30 to 6:30 PM as well as on Saturday, October 22, 2022 from 11:00 AM to 2:00 PM at the intersection of South Plank Road (NYS Route 52) and Union Avenue (NYS Route 300).

Review of the collected traffic data reveals that the weekday evening PSH occurs between 4:45 - 5:45 PM and the Saturday PSH occurs between 12:30 PM - 1:30 PM. Figure 2, located in Appendix A, shows the existing peak hour traffic volumes at the study intersections. All traffic counts are contained in Appendix B.

Existing Capacity Analysis

The methodology utilized in the capacity analyses is described in the *Highway Capacity Manual*, published by the Transportation Research Board. In general, the term Level of Service (LOS) is used to provide a "qualitative" evaluation of capacity based upon certain "quantitative" calculations related to empirical values, such as traffic volume and intersection control.

At signalized intersections, factors that affect the various approach capacities include width of approach, number of lanes, signal "green time", turning percentages, truck volumes, etc. However, delays cannot be related to capacity in a simple one-to-one fashion. For example, it is possible to have delays in the Level of Service "F" range without exceeding roadway capacity. Substantial delays can exist without exceeding capacity if one or more of the following conditions exist: long signal cycle lengths; a particular traffic movement experiences a long red time; or progressive movement for a particular lane group is poor. Table I describes the level of service ranges for signalized intersections.

An unsignalized (STOP sign controlled) driveway or side street along a through route is seldom critical from an overall capacity standpoint, however, it may be of great significance to the capacity of the minor cross-route, and it may influence the quality of traffic flow on both. When analyzing an unsignalized intersection, it is assumed that both the major street through and right turn movements are unimpeded and have the right-of-way over all side street traffic and left turns from the major street. All other turning movements in the intersection cross, merge with, or are otherwise impeded by major street movements. Traffic delays at unsignalized intersections are determined by sequentially processing these impeded movements. Table II describes the level of service ranges for unsignalized (stop controlled) intersections.

Table I
Level of Service Criteria
for Signalized Intersections

Level of Service	Average Control Delay (seconds per vehicle)
A	0.0 to 10.0
B	10.1 to 20.0
C	20.1 to 35.0
D	35.1 to 55.0
E	55.1 to 80.0
F	greater than 80.0

Table II
Level of Service Criteria
for Unsignalized Intersections

Level of Service	Average Control Delay (seconds per vehicle)
a	0.0 to 10.0
b	10.1 to 15.0
c	15.1 to 25.0
d	25.1 to 35.0
e	35.1 to 50.0
f	greater than 50.0

It should be noted that the analyses within the *Highway Capacity Manual* assume a random arrival for all the movements, which may not be the case if an adjacent traffic signal is present that platoons vehicles, such as the signalized intersection of Union Avenue (NYS Route 300) & South Plank Road (NYS Route 52).

All capacity analyses were performed utilizing Synchro 11 software. It should be noted that the existing percentage of trucks and peak hour factors were used in the existing analysis. Table III summarizes the existing levels of service (LOS) and delays. All capacity analysis calculation worksheets are contained in Appendix C.

The following are discussions pertaining to each of the existing intersections analyzed.

Union Avenue (NYS Route 300) & South Plank Road (NYS Route 52)

South Plank Road (NYS Route 52) intersects Union Avenue (NYS Route 300) to form a four-leg intersection controlled by a traffic signal. The signal timing directive was obtained from NYS DOT which indicates that a three-phase cycle is utilized with a 115-second cycle length during both peak hours. The eastbound approach of South Plank Road (NYS Route 52) provides a shared left turn/through/right turn lane while the westbound approach provides a shared left turn/through lane and a dedicated right turn lane. The northbound and southbound approaches of Union Avenue (NYS Route 300) both provide a dedicated left turn lane and a shared through/right turn lane. The traffic signal permit plan and timing directive are contained in Appendix B.

A review of the existing analysis reveals that the intersection operates at levels of service "E" or better and all movements operate at levels of service "E" or better during the analyzed peak periods, with the exception of the northbound left turn movement during both analyzed peak hours and the eastbound approach during the weekday evening peak hour, which operate at level of service "F". See Table III for the individual movement levels of service and delays.

FUTURE CONDITIONS

Traffic volumes and operational analyses were developed for both the No Build and Build conditions. The No Build conditions provide a baseline for assessing the impact of the site development traffic on the roadway system. The process of developing the No Build and Build traffic volumes and the subsequent analyses is outlined below.

Regardless of whether the subject site is developed or not, traffic volumes on the surrounding roadways are expected to increase as a result of developments throughout the region. A growth rate of 2.0% per year was applied to the study area intersections.

Through consultation with the Town of Newburgh Planning Board staff, there are nine other developments in the vicinity of the site that have been approved but not yet constructed that are identified as potential significant traffic generators.

- A residential development consisting of 246 units known as the Polo Club, located at 1582 Union Avenue (NYS Route 300), has been approved and is currently under construction. Projections of the associated traffic volumes were developed utilizing data from *Traffic Impact Study*, prepared by Maser Consulting and dated December 9, 2019. It should be noted that this study only includes traffic projections for the weekday morning and evening peak hours. As such, traffic projections for the Saturday midday peak hour were developed utilizing the same methodology outlined within the aforementioned study. The Adjacent Development Traffic Volumes are shown on Figure 3.

- A development consisting of a 290,000 SF warehouse, located along South Plank Road (NYS Route 52) just north of Jeanne Drive, has been approved but not yet constructed. Projections of the associated traffic volumes were developed utilizing data from *Traffic Study*, prepared by JMC Project 18156 and dated December 3, 2020. It should be noted that this study only includes traffic projections for the weekday morning and evening peak hours. As such, traffic projections for the Saturday midday peak hour were developed utilizing the same methodology outlined within the aforementioned study. The Adjacent Development Traffic Volumes are shown on Figure 4.

- A development consisting of a 100-unit senior adult housing facility and a 3,150 SF bank known as Monarch Woods, located at 25 Monarch Drive, has been approved but not yet constructed. Projections of the associated traffic volumes were developed by utilizing the Institute of Transportation Engineers' (ITE) Land Use Code (LUC) 252 – Senior Adult Housing and LUC 912 – Drive-In Bank. The Adjacent Development Traffic Volumes are shown on Figure 5.

- A development consisting of two warehouse buildings totaling 1,142,200 SF known as Matrix Logistics Center, located opposite the Newburgh Mall, has been approved and is currently under construction. Projections of the associated traffic volumes were developed utilizing data published within the *Traffic Impact Study*, prepared by Langan Engineering and dated May 14, 2021. It should be noted that this study only includes traffic projections for the weekday morning and evening peak hours. As such, traffic projections for the Saturday midday peak hour were developed utilizing the same methodology outlined within the aforementioned study. The Adjacent Development Traffic Volumes are shown on Figure 6.

- A residential development consisting of 246 apartments known as The Enclave, located at 1565 Union Avenue (NYS Route 300), has been approved and not yet constructed. Projections of the associated traffic volumes were developed using ITE LUC 220 – Multifamily Housing. The Adjacent Development Traffic Volumes are shown on Figure 7.

- A development known as Resorts World Casino, located within the Newburgh Mall, has been approved and opened. Projections of the associated traffic volumes were developed utilizing data published within a memo by Maser Consulting dated February 12, 2021. It should be noted that this memo only includes traffic projections for the weekday morning and evening peak hours. As such, traffic projections for the Saturday midday peak hour were developed utilizing the same methodology outlined within the aforementioned memo. The Adjacent Development Traffic Volumes are shown on Figure 8.

- A development consisting of a 20,000 SF office and retail known as MJKC, located off of NYS Route 32 has been approved but not yet constructed. Projections of the associated traffic volumes were developed using ITE LUC 822 – Strip Retail Plaza (<40K). The Adjacent Traffic Volumes are shown on Figure 9.

- A development consisting of a 173,000 SF warehouse known as MKJ Park Warehouse, located off of NYS Route 32, has been approved but not yet constructed. Projections of the associated traffic volumes were developed using data published within the *Traffic Impact Study*, prepared by Colliers Engineering & Design, dated April 6, 2023. It should be noted that this study only includes traffic projections for the weekday morning and evening peak hours. As such, traffic projections for the Saturday midday peak hour were developed using ITE LUC 150 – Warehouse. The Adjacent Development Traffic Volumes are shown in Figure 10.

- A development consisting of a 56,000 SF warehouse known as Fabulous Events, located along NYS Route 32, has been approved but not yet constructed. Projections of the associated traffic volumes were developed using data published within the *Traffic Impact Study*, prepared by Colliers Engineering & Design, dated May 26, 2023. It should be noted that this study only includes traffic projections for the weekday morning and evening peak hours. As such, traffic projections for the Saturday midday peak hour were developed using ITE LUC 150 – Warehouse. The Adjacent Development Traffic Volumes are shown in Figure 11.

Future No Build traffic volumes were developed by applying the background growth rate of 2.0% for two (2) years to the study area roadways existing traffic volumes. Figure 12, in Appendix A, shows the No Build traffic volumes.

Traffic Generation

Trip generation projections for The Project were prepared utilizing trip generation research data as published under Land Use Code 934 – Fast-Food Restaurant with Drive-Through Window in the Institute of Transportation Engineers' (ITE) publication, *Trip Generation, 11th Edition.* This publication sets forth trip generation rates based on empirical traffic count data conducted at numerous research sites.

According to studies conducted by ITE, traffic associated with LUC 934 is not 100% newly generated. Rather, a portion of the traffic is diverted from the existing traffic stream on the adjacent roadway network. This is because the Popeye's is not exclusively a destination land use, instead patrons stop on their way to/from other locations such as home or work. ITE identifies a 55% passby traffic percentage, and was used during the evening peak hour. It should be noted that there will be passby traffic during the Saturday midday peak period and this passby rate was set at 50%, consistent with the weekday morning peak hour. Table IV below details the traffic volumes associated with the subject project taking into account internal capture and the passby credits.

Table IV
Trip Generation Considering Passby Traffic

Land Use	Trip Type	PM PSH			SAT PSH		
		In	Out	Total	In	Out	Total
2,537 SF Fast-Food Restaurant with Drive-Through Window	Total	44	40	84	71	69	140
	Passby	24	22	46	36	34	70
	New (Primary)	**20**	**18**	**38**	**35**	**35**	**70**

Once the magnitude of traffic to be generated by the site is known, it is necessary to assign that traffic to the adjacent street system. The distribution of new traffic to the surrounding roadways is based on the location of primary arterial roadways, major signalized intersections and existing traffic patterns. Figures 13-17, located in Appendix A, illustrate the Primary Traffic Trip Distribution, Primary Site Generated Volumes, Passby Traffic Trip Distribution, Passby Site Generated Volumes, and the Total Site Generated Volumes, respectively. The Total Site Generated Volumes assigned to the study area network were added to the No Build traffic volumes to generate the Build traffic volumes, which are shown in Figure 18.

Trip Generation Comparison

As previously noted, the site is currently occupied by a Dairy Queen which has an existing trip generation. Table V below provides a comparison between the trips associated with the existing site and the trips projected for the proposed redevelopment.

Table V
Existing vs. Proposed Trip Generation Comparison

Land Use	PM PSH			SAT PSH		
	In	Out	Total	In	Out	Total
Fast-Food Restaurant with Drive-Through Window – Dairy Queen *(Existing)*	40	37	77	66	63	129
Fast-Food Restaurant with Drive-Through Window – Popeye's *(Proposed)*	44	40	84	71	69	140
Difference	**+4**	**+3**	**+7**	**+5**	**+6**	**+11**

As shown in the table above, it is anticipated that 7 additional trips during the weekday evening peak hour and 11 additional trips during the Saturday midday peak hour are anticipated to access the site from the adjacent roadway network with the proposed redevelopment.

A (#) - Signalized Intersection Level of Service (seconds of delay per vehicle)

South Plank Road (NYS Route 52) & Union Avenue (NYS Route 300)

With the addition of site generated traffic, the intersection is anticipated to operate at overall intersection No Build levels of service "F" during the analyzed peak hours. Additionally, each movement is anticipated to operate at No Build levels of service.

Revised signal timings were investigated based on the new traffic volumes for both peak hours. Specifically, the reallocation of one (1) second from the northbound/southbound ROW (phase 1 and 5) to the northbound/southbound lead lefts (phase 2 and 6), in addition to one (1) second from the northbound/southbound ROW (phase 1 and 5) to the eastbound/westbound ROW (phase 3) is recommended during the weekday evening peak hour. Additionally, the reallocation of one (1) second from the northbound/southbound ROW (phase 1 and 5) to the northbound /southbound lead lefts (phase 2 and 6), in addition to two (2) seconds from the northbound/southbound ROW (phase 1 and 5) to the eastbound/westbound ROW (phase 3) is recommended during the Saturday peak hour. It should be noted that with these signal timing modifications, the intersection anticipated to operate at similar or better than No Build levels of service. See Table VI for the individual movement levels of service and delays.

Union Avenue (NYS Route 300) & Site Driveway

The site driveway is proposed to intersect Union Avenue (NYS Route 300) to form an unsignalized T-intersection with the eastbound approach of the site driveway operating under stop control. The eastbound approach of the site driveway is proposed to provide a shared left turn/right turn lane. The northbound approach of Union Avenue (NYS Route 300) is proposed to provide a dedicated left turn lane via the existing two-way center left-turn lane and a dedicated through lane. The southbound approach of Union Avenue (NYS Route 300) is proposed to provide a shared through/right turn lane. As designed, the driveway is anticipated to operate at levels of service "D" or better during the studied peak hours. See Table VI for the individual movement levels of service and delays.

South Plank Road (NYS Route 52) & Site Driveway

The site driveway is proposed to intersect South Plank Road (NYS Route 52) to form an unsignalized T-intersection with the northbound approach of the site driveway operating under stop control. The eastbound approach of South Plank Road (NYS Route 52) is proposed to provide a shared through/right turn lane. The westbound approach of South Plank Road (NYS Route 52) is proposed to provide a shared left turn/through lane. The northbound approach of the site driveway is proposed to provide a shared left turn/right turn lane.

As designed, the driveway is anticipated to operate at levels of service "C" or better during the studied peak hours. See Table VI for the individual movement levels of service and delays.

SITE PLAN

Site Access and Circulation

The site plan was reviewed with respect to the site access and on-site circulation design. As noted previously, access to The Project will be provided via a new full movement driveway along Union Avenue (NYS Route 300) and a new full movement driveway along South Plank Road (NYS Route 52).

The parking lot will be serviced by parking aisles with widths of 18', which will allow for one way circulation and 60 degree parking.

Parking

The Town of Newburgh Ordinance sets forth a parking requirement of 1 parking space per 4 seats for restaurants and fast food establishments. The Ordinance also states a requirement of 1 space per 40 SF. This equates to a parking requirement of 6 spaces for the proposed 24-seat Popeye's restaurant. The site as proposed provides 22 spaces and as such, the Ordinance requirement is met.

An Operational Characteristics Study has been conducted by Dynamic Traffic for Popeye's sites which identified a maximum parking demand of 6.48 spaces per 1,000 SF, and equates to a parking demand of 16 spaces for the proposed 2,537 SF Popeye's (inclusive of employees). Consequently, the proposed 22 parking spaces will be sufficient to support the anticipated demand of the project.

It is proposed to provide parking stalls with dimensions of 9'x18', which satisfy the Ordinance minimum requirement of 9'x18'.

FINDINGS & CONCLUSIONS

Findings

Based upon the detailed analyses as documented herein, the following findings are noted:

- The proposed 2,537 SF Popeye's Restaurant is projected to generate 20 entering trips and 18 exiting trips during the evening peak hour, and 35 entering trips and 35 exiting trips during the Saturday peak hour that are "new" to the adjacent roadway network.

- Access to the site is proposed to be provided via a new full movement driveway along South Plank Road (NYS Route 52) and a new full movement driveway along Union Avenue (NYS Route 300).

- With the addition of site generated traffic and proposed signal retiming, the intersection of Union Avenue (NYS Route 300) and South Plank Road (NYS Route 52) is anticipated to operate at overall No Build intersection level of service "F" during the peak hours studied.

- As designed, the intersection of Union Avenue (NYS Route 300) and the site driveway is anticipated to operate at levels of service "D" or better during the peak hours studied.

- As designed, the intersection of South Plank Road (NYS Route 52) and the site driveway is anticipated to operate at levels of service "C" or better during the peak hours studied.

- As proposed, The Project's site driveways and internal circulation have been designed to provide for safe and efficient movement of automobiles and large wheel base vehicles.

- The proposed parking supply and design is sufficient to support the projected demand and satisfies the Ordinance requirements.

Conclusions

Based upon our Traffic Impact Study as detailed in the body of this report, it is the professional opinion of Dynamic Traffic LLC that the adjacent street system of the Town of Newburgh and NYSDOT will not experience any significant degradation in operating conditions with the construction of The Project. The site driveways are located to provide safe and efficient access to the adjacent roadway system. The site plan as proposed provides for good circulation throughout the site and provides adequate parking to accommodate The Project's needs.
